Slide-a-Key

Musical Transposer

~ Sleeve Edition ~ cut it, glue it, slide it, play it in any key

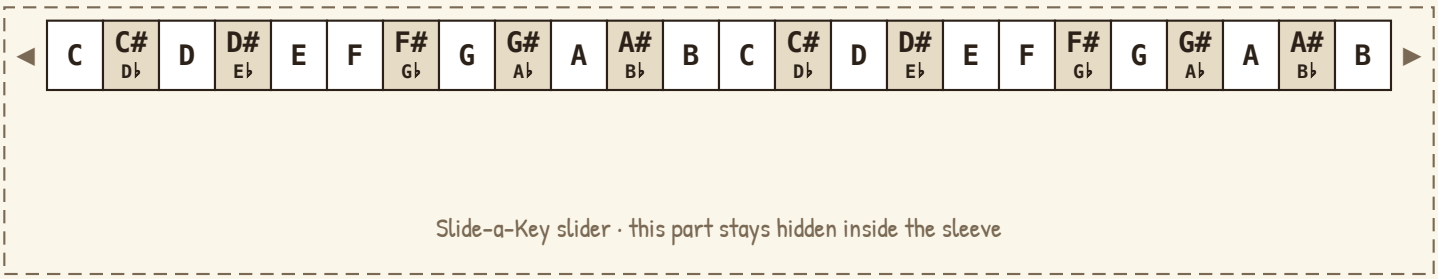

SLEEVE – cut around the dashed outline and cut out the window

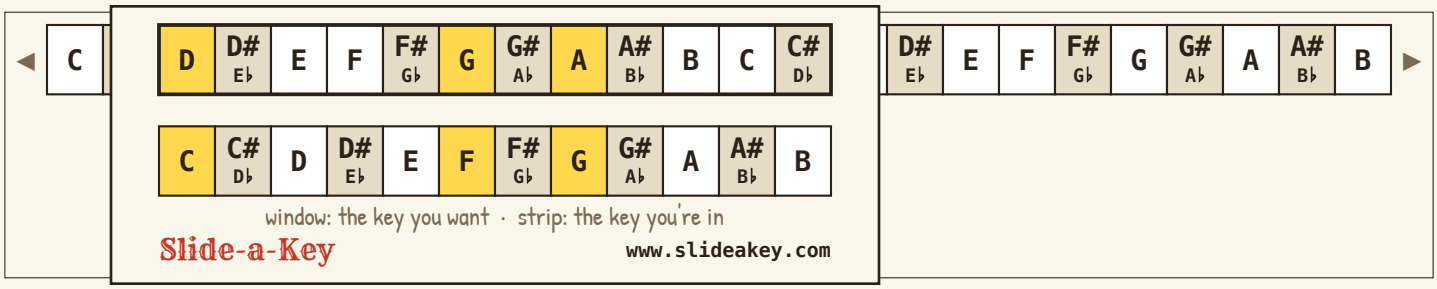

Assembly

1. Print at 100% (no "fit to page"). Thin cardstock works best.
2. Cut out the sleeve and the slider along the dashed lines.
3. Cut out the window. A craft knife is easiest, so ask an adult to help.
4. Fold the back panel behind the front along the lower fold line, printed sides out.
5. Fold the GLUE flap inward and glue it to the back side of the front's bottom edge.
6. When it's dry, slide the slider in from either end, notes facing the window.

SLIDER – cut along the dashed outline

Quick Example: C up to D

Slide until the key you want (D) shows in the window over the key you're in (C).
Then read across: the three main chords, C, F and G, become D, G and A. Am becomes Bm.

Thank you for choosing Slide-a-Key!

Free to print and share. Please don't sell.
